

COVID-19 Requirements

Vaccination Requirement

The college's clinical affiliates require all students to be vaccinated before they are cleared for clinical rotations to best protect the safety and well-being of patients and our community. This mandate applies to all students accepted into the Radiography Program and should be considered before deciding to apply for the Radiography Program.

N95 Respirators and PPE

All Allied Health students will be fit tested with N95 respirators before clinical rotations start. Spare N95s will be distributed after the appropriate make/model respirator has been determined and will be replaced when needed. Students are to consult with the Program Director for replacements.

The guidelines for PPE differ slightly at each clinical site and students are required to follow the policy of their location. Students found to be out of compliance with the PPE guidelines will be removed from their clinical site for the remainder of that day and the hours will need to be made up. Any continuing infractions will result in escalating corrective actions.

Symptomatic

Students that are symptomatic should contact the nurse at NCC's Health and Wellness Center at 610-861-5365 and consult with their Program Director/Clinical Coordinator and health care provider. The Health and Wellness Center will communicate with the student and Program Director regarding clearance to return to clinical.
